Year 8 Science: Hormones, the menstrual cycle, flowers and fungi

Name: _____ Date: _____

Try these without your notes first, then check the answer key.

Practice

1. Give the three parts of the definition of a hormone.

2. What happens to the lining of the uterus if an egg is not fertilised?

3. Which hormone made by the testes keeps sperm production going?

4. Put these in order: germination, pollination, seed dispersal, fertilisation, seed formation.

5. Why can a mould appear on bread in a closed bag, even though nobody put it there?

Fix the mistake

6. Correct this statement: "A hormone works on every cell it reaches in the blood."

7. Correct this statement: "A period is when the egg is released."

8. Correct this statement: "Pollination and fertilisation are the same thing."

9. Correct this statement: "Mushrooms grow from seeds."
